**PRINCIPLES:**

1. Maintain the integrity of Freeway Park and enhance with new features that connect the park to the city while opening and extending the edges.
2. Develop a master plan (preservation, recreation, etc.) that is program-driven.
3. Align the edges of Freeway Park with those of the mountains and the water, and the city by extending the concept into the new park through an array of forms.
4. Create an inclusive plan that addresses accessibility issues in Freeway Park and the new site.

**North Hubbell Cliff Walk**
8th Avenue Spine
Pedestrians and cyclists access the park through the WSCC from Pike. The edges fold to create ramps up to the WSCC Plaza and downward to the East Plaza.
